

PIGEON CONTROL DUBAI

Why Pigeons Keep Coming Back & How to Stop Them
Permanently

PIGEON PROBLEM GUIDE

www.birdcontroldubai.com

Why

1

Strong Homing Instinct

Once pigeons find a roost they return daily — even travelling miles. Chasing them does nothing.

2

Year-Round Breeding

Dubai's climate allows pigeons to breed 12 months a year — one pair = 12 chicks annually.

3

Structural Damage

Acidic droppings (pH 3–4.5) eat through paint, concrete and metal surfaces rapidly.

4

Health Hazard

Pigeons carry 60+ diseases. Dried droppings become airborne dust causing respiratory illness.

Why

1

Plastic Owls & Decoys

Pigeons learn within days these pose no real threat. Completely useless within a week.

2

Aluminum Foil Strips

Effective for 2–3 days then totally ignored. Melts and warps in Dubai's extreme heat.

3

Ultrasonic Devices

Zero scientific evidence of long-term effectiveness against pigeons in urban settings.

4

Gel Repellents Alone

Only effective combined with physical exclusion. Never a standalone permanent solution.

The Scale of Dubai's Pigeon Problem

Perimeter

1

Bird Spikes

Stainless steel or polycarbonate spikes on every landing surface. Most cost-effective solution.

2

Bird Netting

Physical barrier sealing entire balconies, rooftops, courtyards. Provides 100% exclusion.

3

Anti-Roosting Wire

Spring-loaded tension wire creates unstable landing — ideal for premium commercial buildings.

4

Solar Panel Mesh

Perimeter wire mesh clips around solar arrays sealing the nesting gap beneath panels.

Pige

1

Apartments & Villas

Balcony netting + railing spikes. Transparent options preserve views. Done in 2–4 hours.

2

Hotels & Luxury Resorts

Invisible wire systems and UV-clear netting. Zero visual impact on premium properties.

3

Warehouses & Factories

Full internal roof netting across trusses. Industrial-grade complete exclusion system.

4

Restaurants & Cafes

Terrace netting + vent covers. Full Dubai Municipality compliance guaranteed.
